

EMERGENCY DIPLOPACK HELP

Stuck outside a Guild City and need to operate the door panel to get in? You'll need to follow 3 steps.

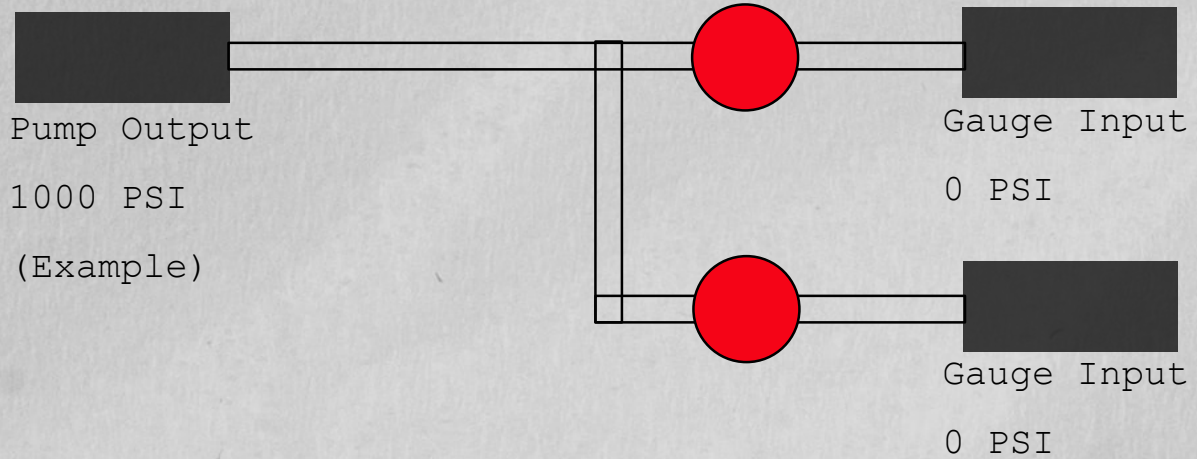

1.

Set up the pressure pumps for the hydraulics. The pump outputs should be visible somewhere if you look above the panel. We recommend drawing out the full information and working it out on paper. The system works as follows:

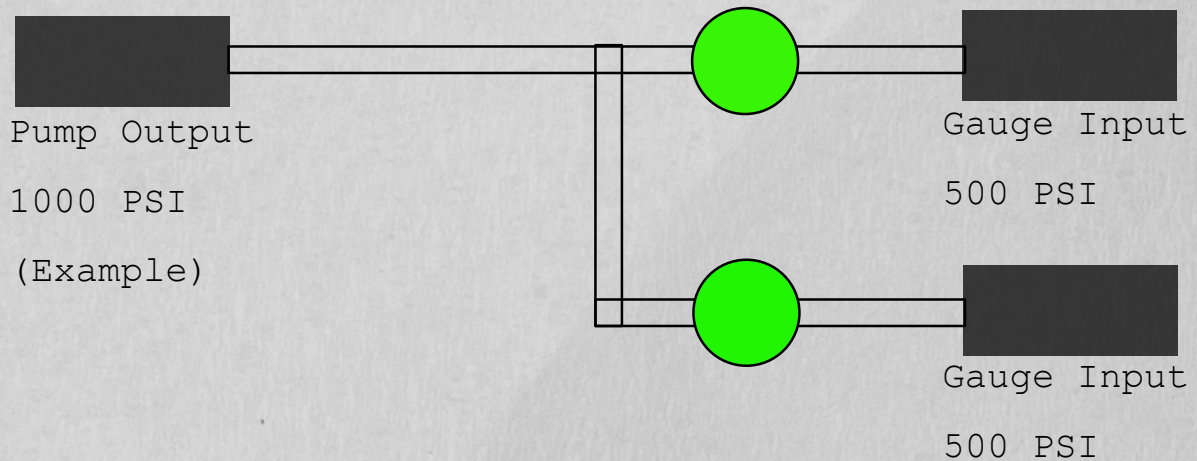

1 Valve open: All PSI goes to Gauge

0 Valves open: No PSI gets through

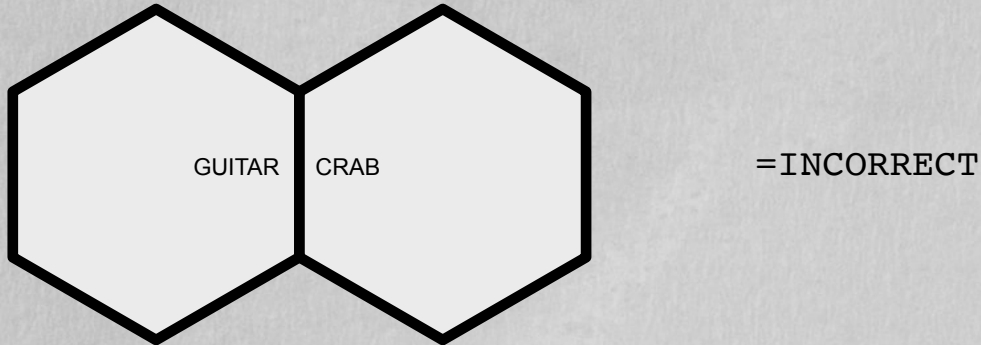

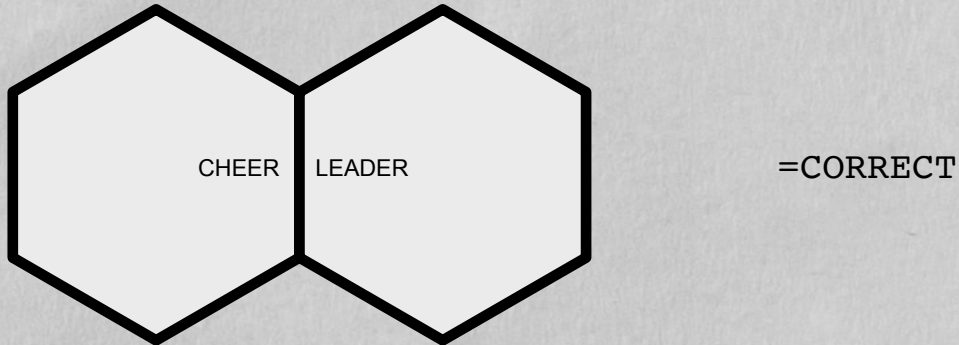

2 Valves open: PSI is split between Gauges

EMERGENCY DIPLOPACK

2.

Calibrate the U.N.I.C.O.R.N's onboard communication tiles. You must spin each tile so that the correct link words align. Example below:

3.

Look at the area around the panel where you will find symbols that relate to colours. If all panel users push the same symbol, one of the brains will indicate a number. Input this number into the correct colour field.

Observe:

A symbol has a red glow for example. Every user should select this symbol on their consoles, and a number will be revealed. This number must be put into the red code field.
